

KiKa funding options and application procedures

Financial support can be requested by researchers working at a scientific institution in the Netherlands. Support can be requested for fundamental, clinical, epidemiological or psychological research. **Research for which financial support is requested should have a clear link with childhood cancer.**

Funding types

KiKa has three types of funding:

- Research projects (max. 4 years, max. € 600,000)
- Pilot projects (max 1.5 years, max. € 125,000)
- Research programs (max. 6 years, max. € 2,500,000)

Research projects:

- The most common form of research, that evolves around 1 or multiple research questions.
- In principle, a project can have a maximum of 2 project leaders. Proper justification should be provided in case more than 2 project leaders are assigned.
- It is allowed to collaborate with foreign research groups for a research program, if there is a clear added value of this collaboration. A maximum of 20% of the total requested budget can be assigned to the part of the research that is performed abroad.

Pilot projects:

- Pilot projects have the specific aim to explore the feasibility of an **extraordinary, innovative** research proposal. The aim of a pilot project is to determine if a research proposal offers viable opportunities. If successful, a pilot project will form the basis for a research project.
- The total costs of a pilot project (including possible contributions from other sources) should be no more than €125.000, and should cover all personnel and material costs
- In principle, a pilot project can have a maximum of 2 project leaders. Proper justification should be provided in case more than 2 project leaders are assigned.

Programs:

- The funding type “program” is specifically designed for elaborate research proposals, consisting of multiple complementary work packages.
- Programs for instance enable tackling of multiple (multidisciplinary) research questions within an overarching research project and enable projects which require large or complex collaborations.
- The added value of a program over multiple research projects should be argued convincingly.
- A clear plan for valorisation and translation of the results, generated within a program, should be composed.
- It is allowed to collaborate with foreign research groups for a research program, if there is a clear added value of this collaboration. A maximum of 20% of the total requested budget can be assigned to the part of the research that is performed abroad.

Data generated within any type of funding should be made publicly available, unless they require specific protection. If confidential data are generated, the strategy to protect these data should be described.

Submitting an application for funding

Applications can be submitted by sending the appropriate form and KiKa budget tool (in excel format) digitally to onderzoek@kika.nl.

In case of a resubmission or adapted form of a previously submitted proposal: please make clear in which way the proposal is adapted (via an accompanying letter and, if applicable, visually highlighting the parts of the text that have been adapted).

Research projects and pilot projects:

KiKa aims to for a careful yet fast and efficient reviewing process. We aim to complete the reviewing process within six months.

When a project application is submitted before one of the following dates, the project will be discussed at the next scientific board meeting.

Dates 2021:

1 January

1 August

Programs

The next option to submit a program pre-application is 1 April 2023.

Programs proposals are reviewed once a year. Program pre-applications should be submitted before **1 April**. Invitations for full program applications will be sent in the beginning of July. Full applications should be submitted before **1 October**. Final decisions will be communicated in December. This procedure can be adapted or accelerated in case KiKa considers this necessary.
